SQLServer Lab

Note: Use ITI DB

- 1. Create a scalar function that takes date and returns Month name of that date.
- 2. Create a multi-statements table-valued function that takes 2 integers and returns the values between them.
- 3. Create inline function that takes Student No and returns Department Name with Student full name.
- 4. Create a scalar function that takes Student ID and returns a message to user
 - a. If first name and Last name are null then display 'First name & last name are null'
 - b. If First name is null then display 'first name is null'
 - c. If Last name is null then display 'last name is null'
 - d. Else display 'First name & last name are not null'
- 5. Create inline function that takes integer which represents manager ID and displays department name, Manager Name and hiring date
- 6. Create multi-statements table-valued function that takes a string
 If string='first name' returns student first name
 If string='last name' returns student last name
 If string='full name' returns Full Name from student table
 Note: Use "ISNULL" function
- 7. Write a query that returns the Student No and Student first name without the last char
- Write query to delete all grades for the students Located in SD Department

Bonus:

- 1. Give an example for hierarchyid Data type
- 2. Create a batch that inserts 3000 rows in the student table(ITI database). The values of the st_id column should be unique and between 3000 and 6000. All values of the columns st_fname, st_lname, should be set to 'Jane', 'Smith' respectively.
